

Product Profile

Enerpac Powered Tube Bender:

An ENERPAC powered tube bender.

The combination of ENERPAC high force tools with SWADESIR tube bender tooling. The result, a precision draw type tube bender which produces high finish, distortion free bends in thin wall aluminium and copper alloys, steel and stainless steel tubing up to 50.8 mm diameter. And the bonus of total accuracy and repeatability of bend angle and high productivity.

The complete machine as illustrated above is fitted with a mandrel bed and hydraulic mandrel extraction system.

The machine has the facility to vary the bend angle progressively during set up. Once set, the angle can be repeated as often as required.

The ENERPAC components are proven products available off-the shelf from the world's largest manufacturer of high force tools. SWADESIR are specialist tube and pipe forming machine makers and have been for over 50 years.

Both products are designed and manufactured for maximum service life and minimum maintenance over the long term.
